09 · FAQ & Quick Reference

> *Keep this open during training and daily work. Every answer maps to a real screen — the **Go to** column is your fastest path.*

Everyday questions

Q: Where do I start my day?
Your home screen is set by your role — delivery roles land on the **Work Inbox** (`#/inbox`), executives on the **Executive Control Tower** (`#/dashboard`), read-only roles on **Reports**. Everything waiting for you is in the inbox.

Q: How do I find anything quickly?
`⌘K` (Ctrl+K) — global search across projects, tasks, risks, docs and people.

Q: Can I edit a value directly in a list?
Yes — **double-click** any editable cell in register/task/RAID lists and type. The full form is always available in the row's drawer.

Q: A colleague changed something and my dashboard looks stale.
Dashboards refresh in realtime; if you suspect staleness, check the **Live** badge time and the **Integrity** screen (`#/integrity`) freshness score.

Q: My menu is missing screens other people have.
That is least-privilege working correctly. Your role decides the menu; ask a PMO admin if your role genuinely needs more (`Administration → Roles`).

Q: I cannot open the Executive Control Tower.
It requires `executive.view`. You will see a clear "Restricted area" panel with shortcuts — ask your PMO admin if you need executive oversight.

Delivery questions

Q: The schedule dates moved — did we approve that?
Check **Baselines** (`#/baselines`) and **Changes** (`#/changes`). Approved date changes travel through change control; anything else is a bug — report it.

Q: Why does EVM show no indices for my project?
EVM is computed at **period close** with actuals present. Log/approve timesheets, then close an EVM period (`#/evm`).

Q: My project's freshness score is red. What now?
Open **Data Integrity** — the panel names the worst feed. In practice it is almost always timesheets or actuals older than the threshold; chase the feed, the score recovers automatically.

Q: Can I run the plan without touching the live data?
Yes — **Planning Lab** (`#/tools`): what-if scenarios, CPM calculations and

leveling prescriptions never mutate the live plan until you adopt them.

Q: Over-allocated resources keep appearing. Where do I fix them?
`#/resources` shows the load; Planning Lab → Resource leveling proposes moves that never touch critical tasks and honour float.

Governance questions

Q: A gate decision or CR approval — where do I act?
Governance (`#/governance`) — pending gates and changes in flight, with your decision buttons if you hold `gate.decide` / change approval rights.

Q: Who changed this value last week?
Administration → **Audit Trail** (`#/admin/audit`) — filter by entity, user or date; before/after values are recorded.

Q: The AI Assistant drafted an action — did it execute?
Never automatically. AI drafts go through human review; AI proposes, people decide.

Admin questions

Q: We need an extra field on projects — do we call IT?
No. **Field Dictionary** (`#/admin/fields`) adds typed custom fields live; **Form Tab Builder** (`#/admin/tabs`) places them on the form. Both apply immediately, are filterable, reportable and API-visible.

Q: Automations keep firing — is that safe?
The scan endpoint deduplicates executions over 24 hours; every execution is logged. Check **Control Automations** execution history before assuming a loop.

Q: How do I give someone a custom set of permissions?
Roles & Permissions — copy a template, adjust the matrix, assign to users.

Quick reference card

Task	Go to
Find anything	`⌘K`
My tasks & approvals	`#/inbox`
Edit a cell in place	double-click
Portfolio overview	`#/dashboard`
Project list	`#/projects` (register twin: `#/register`)
Plan / WBS / schedule	`#/wbs`, `#/schedule`
Test a scenario	`#/tools` (Planning Lab)
Log/submit hours	`#/timesheets`
Cost truth	`#/financials`
CPI/SPI	`#/evm`
Risks & issues	`#/raid`
Raise/approve change	`#/changes`, `#/governance`
Data trust score	`#/integrity`
Board pack	`#/reports/leadership`
Self-service report	`#/reporting`
Trends	`#/analytics`
Automations	`#/automations`
Add a custom field	`#/admin/fields`
Who changed what	`#/admin/audit`

Keyboard & UI habits

- `⌘K` / `Ctrl+K` — global search.
- Double-click — inline edit.
- Hover a 3D chart — exact values; click — drill to source.
- "Live · HH:MM" badge — freshness of the current view.
- Every list: filter, sort, search — and every list exports.

Who to call

Situation	Owner
Access / role questions	PMO Administrator (`pmo@pmct.io` in demo)
Plan/schedule disputes	Program Manager
Budget/forecast questions	Finance Controller
Platform/config changes	PMO Administrator (Administration group)
Suspicious data	Check Integrity first, then Audit Trail

PM Control Tower v3.1.0 — training pack. Companion to `docs/` guides: 01-DEPLOYMENT, 02-ADMIN, 03-USER, 04-ARCHITECTURE, 05-API, 06-DATA-MODEL, 07-RBAC-MATRIX, 09-OPERATIONS, 10-SECURITY, 11-INTEGRITY.
